Om mig/ About

I am adjunct professor in Space Physics since April 2013, on secondment from the [European Space Agency](#), ESA. I work 80% for KTH and 20% for the [Swedish National Space Board](#) (Rymdstyrelsen).

At KTH, I'm director of KTH Space Center, which started in March 2014.

My research is related to particles in space: radiation on the International Space Station (ISS) since many years, and lately I joined a project to put an experiment on ISS to study ultra-high energy cosmic rays: [JEM-EUSO](#). I'm responsible for the [AeroSpace Master program](#). In this program I teach the course [Human Spaceflight, SD2905](#).

You can find me either in the venues of the Particle & Astroparticle Physics group on floor 5 at AlbaNova, or my office on Teknikringen 8, room 115.
